PROFESSIONAL SUMMARY

Aspiring Cloud & DevOps Engineer with hands-on experience in Linux, AWS, Docker, Kubernetes, Terraform, Jenkins, Prometheus, and Grafana. Skilled in cloud infrastructure deployment, automation, CI/CD implementation, monitoring, troubleshooting, and System administration. Strong foundation in AWS services, Linux environments, Infrastructure as Code, and containerized applications. Seeking opportunities as a Cloud Support Associate, Cloud Operations Associate, Junior Cloud Engineer, DevOps Intern, or Junior DevOps Engineer

TECHNICAL SKILLS

- Cloud Platforms: AWS (EC2, S3, IAM, VPC, Route 53, CloudWatch, ALB, Auto Scaling, CloudFormation)
- Infrastructure as Code: Terraform (Infrastructure Provisioning, State Management, Resource Automation, Reusable Modules)
- DevOps & Automation: Docker, Kubernetes (Minikube), Jenkins, GitHub Actions, CI/CD Pipelines, Containerization
- Monitoring & Observability: Prometheus, Grafana, AWS CloudWatch, Metrics Collection, Alerting, Performance Monitoring
- Operating Systems & Linux Administration: Linux (Ubuntu), Windows, WSL, User Management, File Permissions, Package Management, Process Monitoring, System Logs, Shell Scripting
- Networking: TCP/IP, DNS, HTTP/HTTPS, SSH, Load Balancing, VPC, Security Groups
- Programming & Tools: Git, GitHub, Python, Bash, HTML
- Cloud Support & Operations: Troubleshooting, Incident Management, Root Cause Analysis, Monitoring & Alerting, Service Availability, System Administration

TECHNICAL PROJECTS

1. Production-Grade AWS DevOps & CI/CD Deployment

Technologies: AWS, Jenkins, Docker, Git

- Designed and deployed a production-style AWS infrastructure using public and private subnets within a secure VPC architecture.
- Implemented Application Load Balancers and Auto Scaling Groups to improve availability and distribute traffic efficiently
- Automated build, test, and deployment workflows using Jenkins CI/CD pipelines integrated with GitHub repositories.
- Built and deployed Dockerized applications through automated pipelines, reducing manual deployment effort.
- Configured secure networking, access controls, and monitoring to support reliable application operations.

2. Infrastructure Automation with Terraform

Technologies: Terraform, AWS, IAM

- Automated provisioning of AWS infrastructure including VPCs, EC2 instances, Security Groups, and IAM resources.
- Developed reusable Terraform modules to standardize infrastructure deployment across environments.
- Managed Terraform state files and implemented best practices for infrastructure lifecycle management.
- Reduced manual configuration tasks through Infrastructure as Code practices.
- Improved deployment consistency and repeatability across cloud environments.

3. Kubernetes Cluster Orchestration & Monitoring Stack

Technologies: Kubernetes, Docker, Prometheus, Grafana

- Containerized applications using Docker and deployed them to Kubernetes clusters.
- Configured Deployments, Services, and rolling updates to maintain application availability.
- Implemented Prometheus-based monitoring to collect infrastructure and application metrics.
- Built Grafana dashboards to visualize CPU, memory, disk, and network utilization.
- Created alerting mechanisms to support proactive monitoring and faster issue detection.

EDUCATION

**Bachelor of Technology
(B.Tech)**

Computer Science & Engineering

Nehru College of Engineering &
Research Centre 2024 - 2028 |
SGPA : 8.00

CERTIFICATIONS & INTERNSHIPS

- DevOps Internship Program - Techcake Cloud Innovations
- DevOps Essentials Certificate - Techcake Cloud Innovations
- AWS Hands-on Workshop on Agentic AI - ICSET AWS Architecture Labs
- AWS Cloud Practitioner Coursework and Training
- Prompt Engineering & Generative AI Literacy - IBM Cognitive Class / SkillQuest
- Linux, Git, Docker, and Kubernetes - Hands-on Learning Programs
